

# Global Telepresence

Make it personal. Conduct all your meetings ‘face-to-face’

From boardroom meetings to collaboration between cross-functional teams, face-to-face interactions tend to lead to faster decision-making. That’s why Telstra International offers Global Telepresence solutions giving you all the benefits of a face-to-face meeting – without the expense of airfares, hotels, meals and car services. Based on best of breed Cisco TelePresence™ products, this high-definition video conferencing solution can contribute to lower travel costs, a reduced carbon footprint and higher employee productivity.

## Benefits:

### Global availability

Telstra’s Global Telepresence solution leverages Telstra’s high-capacity, high-availability IP Virtual Private Network (IP VPN). Acting as the underlying network architecture for Global Telepresence, it provides superior performance and quality of service which means your Global Telepresence sessions maintain a reliable connection and contribute to an enhanced conferencing experience.

### A supported service

Cisco TelePresence specialists in your region will conduct room readiness audits and network assessments where appropriate to maximise the performance of your service. They will also deliver on-site training to familiarise your team with the Global Telepresence experience and provide on-going service support via Telstra’s collaborative support centre.

### An immersive experience

High Definition screens provide colourful, life-size images of meeting attendees, while some Telepresence equipment provides spatial audio channels enabling video tracking of participants in large (up to 48) site conferences. Each Global Telepresence service has been configured to enhance the “sitting across the same table” illusion.

### Straightforward to use

From solo-user units for executive offices, to solutions tailored for multi-purpose suites, Telstra has a Global Telepresence solution to meet a range of requirements and environments. Each system has been designed specifically for ease of use, so setting up ‘face-to-face’ meetings between two sites is as simple as pressing a button. Integration with Microsoft Outlook® and Lotus Notes® calendars means that booking a Global Telepresence suite is as easy as inviting someone to a meeting.

“Cisco TelePresence” is a trademark of Cisco Systems Inc. and or its affiliates in the United States and certain other countries.  
“Microsoft Office” is a registered trademark of Microsoft Corporation in the United States and/or other countries.  
“Lotus Notes” is a registered trademark of IBM in the United States.

## Features summary:

- **Diverse range of hardware options**
