

A checklist for a successful cloud migration strategy

1

Define success

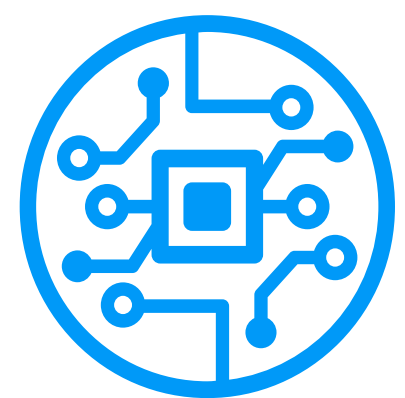

What do I want to achieve?

Improved agility?

Streamlined operations?

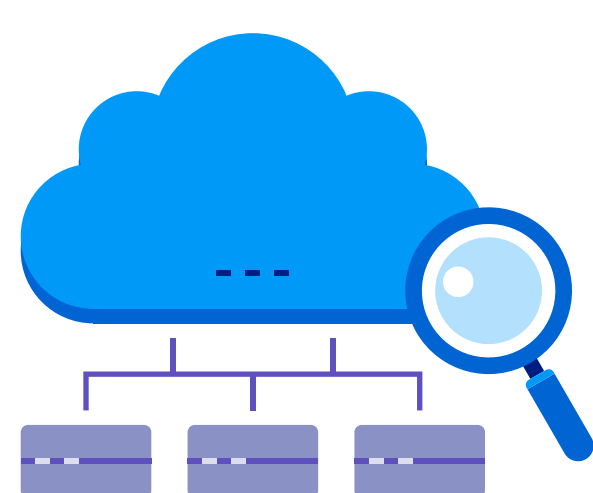

Empower innovation?

Deliver better experiences?

Reach new markets?

59%

of business units in enterprises globally don't delegate authority to central IT for selecting public clouds

2

Ask the difficult questions

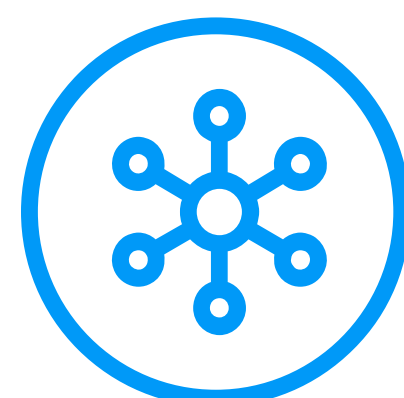

Does cloud support our ability to meet business goals?

How do I connect to the cloud while keeping my data safe?

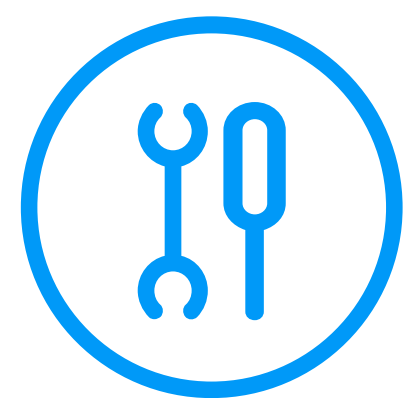

How will the migration affect my users and customers?

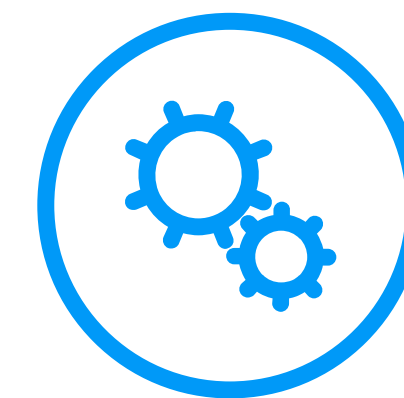

Where will my data, workloads and applications reside?

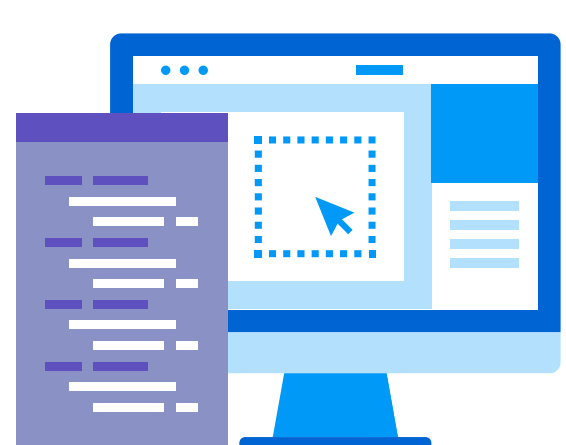

How will my solution scale?

Who needs access, and how do I control it?

How do I ensure compliance?

95%

of organisations surveyed globally are running applications or experimenting with Infrastructure-as-a-Service

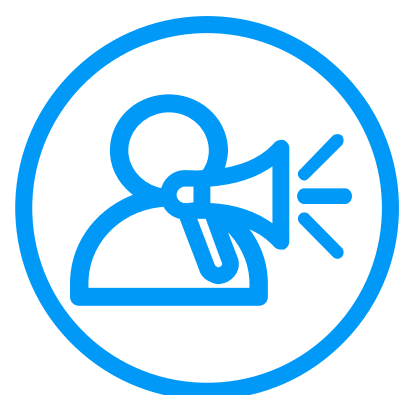

Cloud

Global enterprises run 32% of workloads in public cloud and 43% in private cloud

3

Manage in-house or outsource?

Do I have the skills and resources for a successful migration?

If yes, can you afford to divert these people away from your business while we migrate?

If no, choose partners with the right blend of experience and solutions to help you achieve your goals

#1

Cloud challenge in 2017 was lack of expertise, jointly with security and cost

Download [Telstra 2018 best practice guide to Hybrid Cloud](#) to understand how you can optimise your journey to Hybrid Cloud, or speak to our experts today.

Telstra is an AWS Managed Service Partner who is skilled at cloud infrastructure and application migration, and delivers value to customers by offering proactive monitoring, automation and management of their customer's environment.
