

Maximise the value of your data within your Hybrid Cloud environment

In Hybrid Cloud environments, **data can become fragmented across** different applications and clouds, making it harder for you to get the most out of your assets

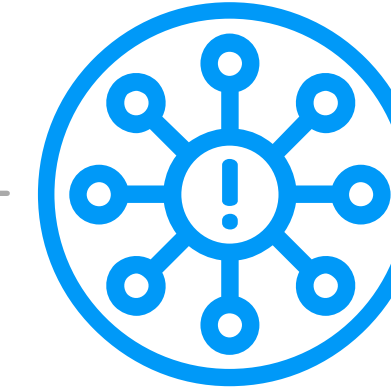

Data sprawl is a growing challenge for enterprises

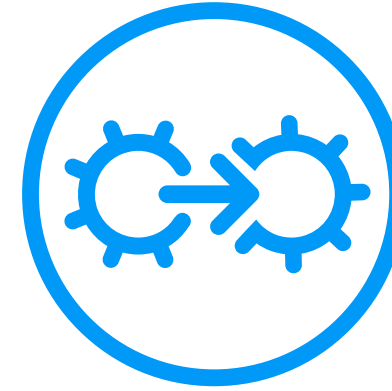

It increases costs and complexity

Costly to transfer data from one cloud or app to another

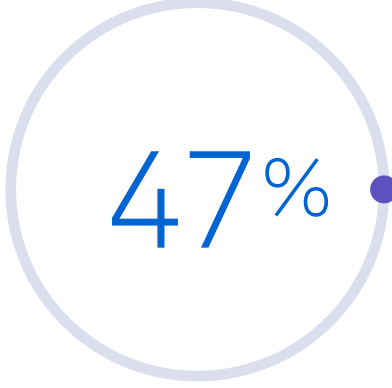

Complex to manage and secure multiple environments

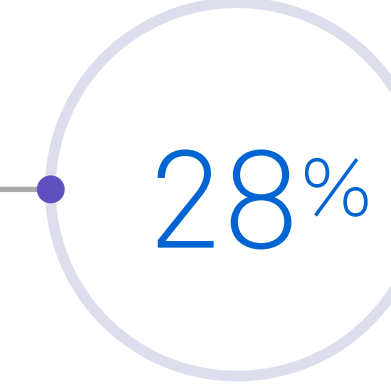

Difficult to combine for analytics purposes

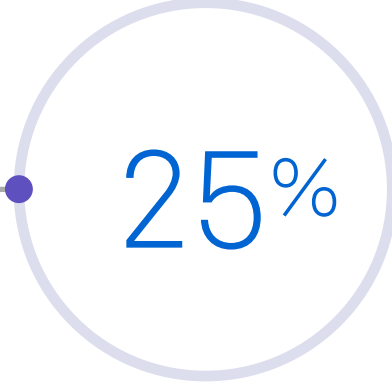

Root causes for data loss¹

Malicious or criminal attack

Human error

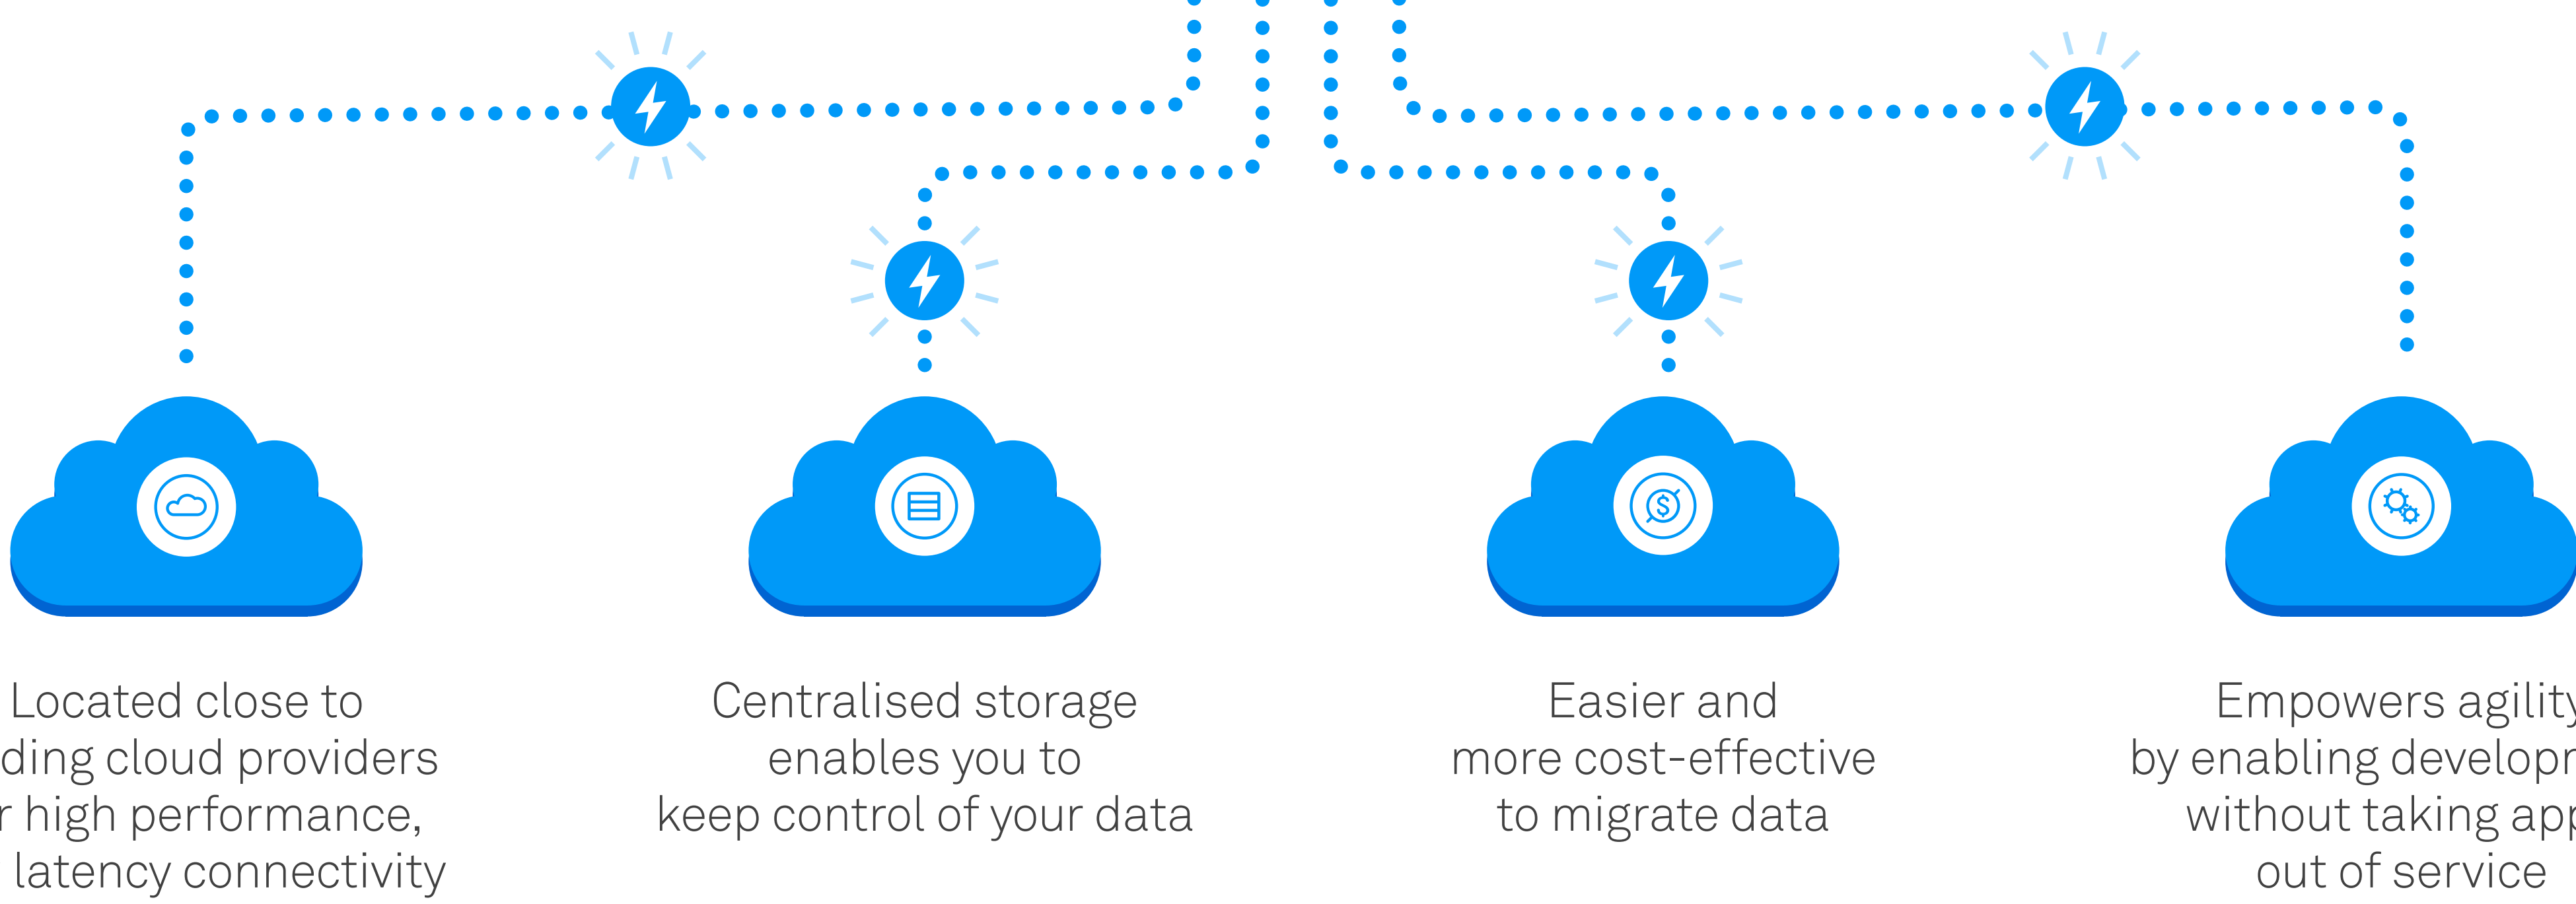

System glitch

Virtual storage

Enables you to take advantage of leading cloud service providers whilst keeping your data safe and centralised with fast, reliable connectivity from Telstra data centres to your chosen cloud provider

Download **Telstra 2018 best practice guide to Hybrid Cloud** to understand how you can optimise your journey to Hybrid Cloud, or speak to our experts today.
